

As part of our \$8 billion, five-year capital investment plan that began July 1, 2018, we're modernizing and transforming the Green Line. Green Line Transformation (GLT) projects represent four levels of transformation: Safety and State of Good Repair; Accessibility; Legacy Car Replacement; and Increased Capacity. Each level aims to improve reliability and the overall quality of service for all riders and communities served by the Green Line.

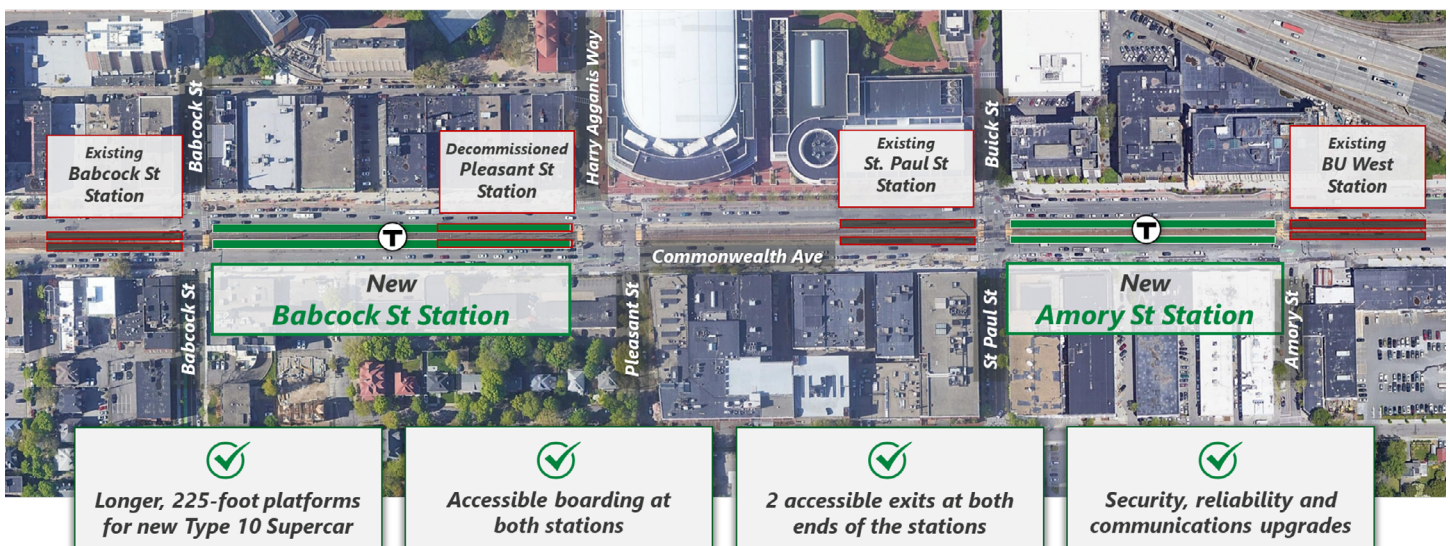

B Branch Station Consolidation

Project construction: February 2021 - Late 2021

Project Overview

This project will consolidate four Green Line B Branch stations (**BU West** with **St. Paul Street** and **Pleasant Street** with **Babcock Street**) along Commonwealth Avenue into two new stations. With new, accessible, and longer platforms, the stations will serve riders in the same vicinity as the current stations but will streamline trips and save time for riders. During construction, free shuttles and MBTA route 57 buses will provide alternate service for riders.

Map of Station Locations

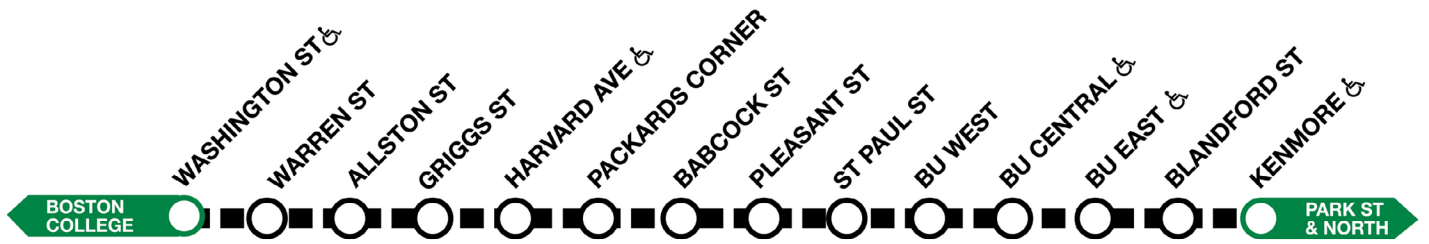

Benefits

- ✓ **Provide accessible stations** with two entrances per platform
- ✓ **Improved pedestrian safety** with wider station platforms and protection from traffic
- ✓ **Faster, more reliable transit service** along Commonwealth Avenue with fewer stops
- ✓ **Rider amenities and improved access** with new lighting, benches, canopies, and safety features

ALTERNATIVE SERVICE

Shuttles/Route 57 Buses

- Weeknight and weekend shuttles run between Washington Street and Kenmore during construction
- From April 17-May 9 and May 17-June 13, shuttles will replace trains during service hours between Washington Street and Kenmore
- Shuttles will be MBTA buses or private carriers
- Check www.mbta.com/GLBwork for the latest schedule
- Pickups will be located at the existing bus stops for Bus Route 57
- Schedule will meet or exceed frequency of current B Branch schedule

Accessibility

- All drivers are trained to assist riders and to operate lifts

Riders' Health & Safety

- Service will be monitored throughout and adjusted to reduce crowding
